EDUCATION

Bachelor of Science in Information Technology (BSIT)
Asia Pacific College | 2015-2021

PROGRAM DESCRIPTION:

The Bachelor of Science in Information Technology (BSIT) is a four-year trimestral undergraduate degree program that aims to prepare students to solve business, societal and industry problems using IT as a tool. The goal of the program is to gear up students in becoming "information technologists" who can assist individuals, organizations and society, in solving problems using relevant IT tools and techniques.

The program keeps pace with changing technology and related business practices by offering courses in areas such as systems analysis and design, IT services, advanced hardware support, mobile and web application development, game development and several programming languages.

SPECIALIZATION:

MOBILE AND INTERNET TECHNOLOGIES [MI]

This specialization aims to produce graduates who have good background in creating IT applications and services for mobile and internet technologies.

WORK EXPERIENCE

Salesforce Industries Developer

Tier 1 Telco in Canada | Feb 2025 to Present

Responsibilities:

- Build proof-of-concept solutions using LWC, CML and Apex, extending and enhancing out-of-the-box components across Revenue Cloud and Communications Cloud.
- Troubleshoot advanced issues across LWC, Apex, CML, Context Service, Apex Hooks, Promotions, and Order Management).
- Support CI/CD deployment pipelines using Copado and Salesforce DX tooling.
- Communicate directly with customers, presenting our work and leading demos of project outputs.

Project Overview:

- OOTB and Custom Promotions
- Utilize Constraint Model Language and Context Service used in Order Management and MACD workflow
- Use Apex Hooks for custom and complex pricing and logic
- Product Catalog Management and data governance

WORK EXPERIENCE

Salesforce Analyst/ Developer

Software Development Company in APAC | Jun 2024 to Dec 2024

- Responsibilities:**
- Gather and analyze business requirements to design Salesforce solutions that align with organizational objectives.
 - Develop and customize Salesforce components, including Flows, Lightning Web Components (LWC), Apex code, and custom applications.
 - Manage data integrity, generate actionable reports, and create user training materials to enhance platform adoption.
 - Monitor system performance, troubleshoot issues, and implement improvements to optimize functionality.
- Projects Overview:**
- Customized web-to-lead form
 - Flow that enables users to populate fields from different objects
 - Jira and Salesforce Sync Integration
 - AWS Partner CRM Connector and Salesforce Integration
 - Salesforce Sales App

Salesforce Developer | Senior Applications Development Analyst

Tier 1 Airline in APAC | Jun 2023 to Jun 2024

- Responsibilities:**
- Performed both Salesforce admin and development work — configuration, Apex development, and Lightning Web Components for the Airline's contact center platform.
 - Designed and built a custom Apex screen-pop integration between Genesys and Salesforce (Genesys Cloud for Salesforce managed package / Open CTI embedded framework), matching inbound calls to existing Cases by Contact/phone number, or auto-creating a new Case when no match was found.
 - Implemented Apex CTI extension points (ScreenPop interface) to override default Genesys screen-pop behavior with custom business logic.
 - Built custom LWC components for the embedded softphone/CTI panel to surface real-time Contact and Case context to agents during live calls.
 - Configured and supported the Genesys-Salesforce integration across both Open CTI and CX Cloud deployment models.
- Projects Overview:**
- Genesys-Salesforce CTI Integration (Open CTI / Embedded Framework)
 - Custom Screen-Pop Logic — existing Case lookup and auto-Case creation
 - Apex CTI Extension Points (ScreenPop interface customization)
 - Custom LWC Agent Console for Embedded Softphone

Salesforce Developer | Senior Applications Development Analyst

Tier 1 Financial Services Industry in APAC | Jul 2022 to May 2023

- Responsibilities:**
- Designed and implemented Salesforce sharing and visibility using Apex-managed sharing (custom Apex sharing reasons on Account/Opportunity Share objects) to enforce need-to-know access appropriate for a financial services environment.
 - Configured Account Teams and Opportunity Teams to drive team-based visibility and role assignment across client accounts and deals.
 - Troubleshot sharing, visibility, and data access issues spanning Apex sharing logic, role hierarchy, and team assignments.
 - Managed source control and deployments via Bitbucket (synced to Jira for change tracking) and GitHub.
 - Performed Technical Validation Testing (TVT) in UAT and Production to confirm deployments.
- Projects Overview:**
- Apex-Managed Sharing Architecture (Account Share / Opportunity Share) for financial data visibility
 - Account Teams and Opportunity Teams configuration
 - Bitbucket-Jira-GitHub source control and deployment pipeline
 - Unit Testing and Technical Validation Testing (TVT) in UAT/Prod
